## Important User Information

Solid state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://literature.rockwellautomation.com) describes some important differences between solid state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

| WARNING | Identifies information about practices or circumstances that can cause an explosion in <br> a hazardous environment, which may lead to personal injury or death, property <br> damage, or economic loss. |
| :--- | :--- |
| IMPORTANT | Identifies information that is critical for successful application and understanding of <br> the product. |
| ATTENTION | Identifies information about practices or circumstances that can lead to personal injury <br> or death, property damage, or economic loss. Attentions help you identify a hazard, <br> avoid a hazard and recognize the consequences. |
| SHOCK HAZARD | Labels may be on or inside the equipment (for example, drive or motor) to alert people <br> that dangerous voltage may be present. |
| BURN HAZARD | Labels may be on or inside the equipment (for example, drive or motor) to alert people <br> that surfaces may reach dangerous temperatures. |

## Catalog Number Explanation

## About the MP-Series Motors

MP-Series low-inertia motors feature single-turn or multi-turn high resolution encoders, and are available with 24 V dc brakes. These compact brushless servo motors meet the demanding requirements of high-performance motion systems.

## Before You Begin

The customer is responsible for inspecting the equipment before accepting the shipment from the freight company. Check the item(s) you receive against your purchase order. Notify the carrier of any shipping damage or missing items immediately.

Store or operate your motor in a clean and dry location within the following environmental conditions.

## Before You Install the Motor

Perform the inspection steps and review the guidelines for shaft seals, couplings and pulleys, and electrical noise prevention.

1. Remove the motor carefully from its shipping container.
2. Visually inspect the motor for any damage.
3. Examine the motor frame, front output shaft, and mounting pilot for any defects.
4. Notify the carrier of any shipping damage immediately.

## ATTENTION

Do not attempt to open and modify the motor beyond changing the connector orientation as described on page 7 . Only a qualified Allen-Bradley employee can service this type of motor.

Failure to observe these safety procedures could result in personal injury or damage to equipment.

## Using Shaft Seals

An additional seal is required on the motor shaft near the motor front bearing, if the shaft is exposed to fluids or significant amounts of fine dust. This includes lubricating oil from a gearbox. An IP66 rating for the motor requires use of a shaft seal and environmentally sealed connectors/cables. The additional seal is not
recommended in applications where the motor shaft area is free of liquids or fine dust and a lower rating will suffice.

- Refer to Environmental Ratings for a brief description of the IP rating for these MP-Series motors.
- Refer to Shaft Seal Kits to find the catalog numbers of seal kits available for your motor.
- Refer to Kinetix Motion Control Selection Guide, publication GMC-SG001 to find environmentally sealed connectors and cables compatible with the MP-Series motors.

## Using Couplings and Pulleys

Mechanical connections to the motor shaft, such as couplings and pulleys, require a torsionally rigid coupling or a reinforced timing belt. The high dynamic performance of servo motors can cause couplings, pulleys or belts to loosen or slip over time. A loose or slipping connection will cause system instability and may damage the motor shaft. All connections between the system and the servo motor shaft must be rigid to achieve acceptable response from the system. Periodically inspect connections to verify their rigidity.

When mounting couplings or pulleys to the motor shaft, ensure that the connections are properly aligned and that axial and radial loads are within the specifications of the motor. Refer to Motor Load Force Ratings for guidelines to achieve 20,000 hours of motor bearing life.

Damage may occur to the motor bearings and the feedback device if sharp impact to the shaft is applied during installation of couplings and pulleys. Damage to the feedback device may result by applying leverage from the motor mounting face to remove devices mounted on the motor shaft.

Do not strike the shaft, couplings, or pulleys with tools during installation or removal. Use a wheel puller applying pressure from the user end of the shaft to remove any friction fit or stuck device from the motor shaft.
Failure to observe these safety procedures could result in damage to the motor and its components.

## Preventing Electrical Noise

ElectroMagnetic Interference (EMI), commonly called noise, may adversely impact motor performance by inducing stray signals. Effective techniques to counter EMI include filtering the AC power, shielding and separating signal carrying lines, and practicing good grounding techniques.

Effective AC power filtering can be achieved by using isolated AC power transformers or properly installed AC line filters.

Avoid the effects of EMI by following these guidelines.

- Physically separate signal lines from motor cabling and power wiring. Do not route signal wires with motor and power wires, or over the vent openings of servo drives.
- Ground all equipment using a single-point parallel ground system that employs ground bus bars or large straps. If necessary, use additional electrical noise reduction techniques to reduce EMI in noisy environments.

Refer to System Design for Control of Electrical Noise Reference Manual, publication GMC-RM001 for additional information on reducing the effects of EMI by improving the system level electromagnetic compatibility (EMC).

## Building and Installing Cables

Knowledgeable cable routing and careful cable construction improves system electromagnetic compatibility (EMC).

To build and install cables, perform the following steps.

1. Keep wire lengths as short as physically possible.
2. Route signal cables (encoder, serial, analog) away from motor and power wiring.
3. Separate cables by $0.3 \mathrm{~m}(1 \mathrm{ft})$ minimum for every $9 \mathrm{~m}(30 \mathrm{ft})$ of parallel run.
4. Ground both ends of the encoder cable shield and twist the signal wire pairs to prevent electromagnetic interference (EMI) from other equipment.

## ATTENTION

High voltage can be present on the shield of a power cable, if the shield is not grounded. Ensure there is a connection to ground for any power cable shield.

Failure to observe these safety procedures could result in personal injury or damage to equipment.

## Install the Motor

All motors include a mounting pilot for aligning the motor on a machine. Preferred fasteners are stainless steel. The installation must comply with all local regulations and use of equipment and installation practices that promote electromagnetic compatibility and safety.

> ATTENTION
> Unmounted motors, disconnected mechanical couplings, loose shaft keys, and disconnected cables are dangerous if power is applied.
> Disassembled equipment should be appropriately identified (tagged-out) and access to electrical power restricted (locked-out).
> Before applying power to the motor, remove the shaft key and other mechanical couplings which could be thrown from the shaft.
> Failure to observe these safety procedures could result in personal injury.

ATTENTION Ensure that cables are installed and restrained to prevent uneven tension or flexing at the | cable connectors. |
| :--- |
| Excessive and uneven lateral force at the cable connectors may result in the connector's |
| environmental seal opening and closing as the cable flexes. |
| Failure to observe these safety procedures could result in damage to the motor and its |
| components. |

## Changing the Orientation of the Connectors

MP-Series motors use two styles of connectors. The connector style is identified by a 2 or a 7 as the connector variable in the motor catalog number. For example, MP $x$-xxxxxx-xx2xxx or MP $x-x x x x x x-x x 7 x x x x$.

- A 2 indicates a circular bayonet connector, facing the shaft.
- A 7 indicates a circular DIN, right angle, rotatable connector. The sections below describe acceptable methods for rotating the connector orientation for these connector styles.

## Reversible Connector Facing the Shaft (MPL-xxxxx-xx2xxx)

This connector housing can be reversed to face down when the motor is installed in a vertical application, or rearward if connector access is restricted in a horizontal application. Perform these steps to remount the connector housing.

1. Remove the three connector housing screws from the motor.
2. Rotate connector housing 180 degrees. If binding of the wire bundles prevents rotation of the connector, you can gain access to the internal motor wiring by following these steps.
a. Remove the four screws from the rear cover of the motor.
b. Carefully reposition the wires around the perimeter of the motor feedback device located under the rear cover.
c. Be sure that the wires are not close to any rotating parts.

## ATTENTION

Do not loosen or remove the motor feedback device (encoder) mounting screws while repositioning the connector wires.
Encoder alignment is a critical adjustment that can only be performed in the factory.
Misadjustment can render the motor inoperable or degrade motor performance, and voids the motor warranty.
Failure to observe this safety precaution could result in personal injury or damage to equipment.
3. Re-install the connector housing and torque the three screws to $0.8 \ldots 1.0 \mathrm{~N} \bullet \mathrm{~m}(7 \ldots 9 \mathrm{lb} \bullet \mathrm{in}$.) after verifying that gaskets are properly positioned, and that no wires are pinched under the connector housing.

## ATTENTION

Exercise caution to prevent damaging the screw holes when reinserting the self-tapping screws holding the connector housing and rear cover.
Excessive force may strip the threads within the screw holes and prevent proper sealing of the motor. Ensure that the specified torque values are not exceeded.
Failure to observe these safety procedures could result in damage to the motor and its components.
4. Re-install the four rear cover screws and torque them to $0.8 \ldots 1.0 \mathrm{~N} \bullet \mathrm{~m}$ $(7 \ldots 9 \mathrm{lb} \bullet \mathrm{in})$ after ensuring that the rear cover O-ring is properly positioned onto the rear cover circular pilot surface.

## Rotatable Circular DIN Connector (MPL-xxxxx-xx7xxx)

The circular DIN connector housing can be rotated up to $180^{\circ}$ in either direction.

Connectors are designed to be rotated into a fixed position during installation of the motor, and remain in that position without further adjustment. Strictly limit the applied forces and the number of times the connector is rotated to be sure that connectors meet the requirements of IP66.

Failure to observe these safety procedures could result in damage to the motor and its components.

Perform these steps to turn the DIN connectors.

1. Mount and fully seat a mating cable on the connector.
2. Grasp both connectors by their housings and slowly rotate them to the outside of the motor. If necessary, repeat this step for each connector (feedback or power/brake).

Only apply force to the connectors; do not apply force to the cable. No tools (for example, pliers and vise-grips) should be used to assist with the rotation of the connector.

## Install the Motor

Perform these steps to install the motor.

## ATTENTION

Damage may occur to the motor bearings and the feedback device if sharp impact to the shaft is applied during installation of couplings and pulleys. Do not strike the shaft, couplings, or pulleys with tools during installation or removal.
Failure to observe these safety procedures could result in damage to the motor and its components.

1. Allow sufficient clearances in the area of the motor for it to stay within its specified operating temperature range.

Refer to Before You Begin for the operating temperature range. Do not enclose the motor unless forced air is blown across the motor for cooling. A fan blowing air across the motor will improve its performance. Keep other heat producing devices away from the motor.

To obtain the specified motor thermal rating, mount the motor on a surface with heat dissipation equivalent to a $12 \times 12 \times 0.5$ inch aluminum heatsink.
2. Refer to Motor Load Force Ratings to determine the radial and axial shaft load limitations of your motor.
3. Place the motor with the connector housing pointing downward.
4. Mount and align the motor.

Electronic zero, Index pulse or Stegmann $\mathrm{ABS}=0$, occurs when the shaft key or dimple is aligned with the connectors.

Refer to Mounting Dimensions for a visual reference of this alignment.
5. Attach all power, feedback, and brake cables after the motor is mounted, and use a drip loop in the cable to keep liquids away from the connectors.

## ATTENTION

Outer surfaces of motor can reach high temperatures, $125^{\circ} \mathrm{C}\left(275^{\circ} \mathrm{F}\right)$ during motor operation.
Take precautions to prevent accidental contact with hot surfaces. Consider motor surface temperature when selecting motor mating connections and cables.
Failure to observe these safety procedures could result in personal injury or damage to equipment.

Use this procedure to attach the cable connectors.

> ATTENTION
> Keyed connectors must be properly aligned and hand-tightened the recommended number of turns.
> Improper connector alignment is indicated by the need for excessive force, such as the use of tools, to fully seat connectors.
> Failure to observe these safety procedures could result in damage to the motor and cable, and their components.

## ATTENTION <br> 

When installing threaded DIN style cable connectors, 0 -rings are required on the motor connectors. The 0 -rings provide ingress protection.
Cables requiring 0 -rings include power cable 2090-XXNPMF-xxSx or 2090-CPxM4DF-xxAFxx, and feedback cable 2090-XXNFMF-Sxx or 2090-CFBM4DF-CDAFxx.
Flex cables with a threaded DIN style connector have an M4 designation.
a. Carefully align each cable connector with the respective motor connector as shown in the following diagram. Do not apply excessive force when mating the cable and motor connectors. If the connectors do not go together with light hand force, realign and try again.
b. Hand tighten the knurled collar 5 to 6 turns to fully seat each connector.

Connector plugs have either a tab or a flat surface with a logo to indicate the alignment point.

If your motor has an ATEX rating for hazardous environments, complete the following step. The catalog number on ATEX motor nameplates ends with H , for example MPL- $x x_{x} x x x-x x x x x \mathrm{H}$.

## WARNING

It is mandatory that the motion system monitor the thermal switch signals from a motor requiring an ATEX rating.

The intrinsic safety protection concepts in the ATEX Direction 94/9/EC must be enabled by connecting the thermal switch signals from the motor to the motion control system.

Failure to observe these safety procedures may lead to personal injury or death, damage to the equipment, or economic loss.
6. Verify the continuity and functionality of the thermal switch signals, TS+ and TS-, transmitted through the feedback cable that connects the motor to its controlling drive.

## Dimensions for Bayonet Connectors (MPL-xxxxx-xx2xxx)

Note: Electronic zero (Index pulse or Stegmann $\mathrm{ABS}=0$ ) occurs when the shaft key or dimple (not shown) is aligned with the connectors (as shown).

The table below list the signal descriptions for the feedback, power, and brake connector pins on the MPL- $x x x x x x-x x 7 x x x x$ connector style.

(1) M23 (BEDC...) connector has nine pins, and the M40 (CEDE...) connector has eight pins.
(2) Power pins $A, B, C$, and $D$ may be labelled as $U, V, W$, and $G N D$ respectively. Brake pins $F$ and $G$ brake may be labelled as + and - respectively. Reserved pins E and H may be numbered 1 or 2 .

## Motor Load Force Ratings

Motors are capable of operating with a sustained shaft load. The radial and axial load force location is shown in the figure, and maximum values are in the tables.

## Load Forces on Shaft

The following tables represent 20,000 hour L10 bearing fatigue life at various loads and speeds. This 20,000 hour life does not account for possible application-specific life reduction that may occur due to bearing grease contamination from external sources.

Radial Load Force Ratings

| Motor | 500 rpm |  | 1000 rpm |  | 2000 rpm |  | 3000 rpm |  | 3500 rpm |  | 4000 rpm |  | 5000 rpm |  |

## Environmental Ratings

| Attribute | Value |
| :--- | :--- |
| Temperature, operating | $0 \ldots 40^{\circ} \mathrm{C}\left(32 \ldots 104{ }^{\circ} \mathrm{F}\right)$ |
| Temperature, storage | $-30 \ldots 70^{\circ} \mathrm{C}\left(-22 \ldots .5^{\circ} \mathrm{F}\right)$ |
| Relative humidity, storage | $5 \ldots 95 \%$ non-condensing |
| Atmosphere, storage | non-corrosive |
| IP Rating ${ }^{(1)}$ of motor with optional shaft seal ${ }^{(2)}$ installed | IP 66 (dust tight, heavy jet spray) |
| Motor without a shaft seal, and mounted in this direction. <br> shaft down <br> shaft horizontal <br> shaft up | IP53 <br> IP51 |
| ATEX rating ${ }^{(3)}$ | IP50 |

(1) International Protection Code (IP 66) is roughly equivalent to a NEMA 35 (dust tight, drip tight).
(2) An optional shaft seal kit is required to provide the IP66 rating (excludes lower rating for cable connectors). See Additional Resources on page 22 for shaft seal installation instructions.
(3) Operational environment according to ATEX directive 94/9/EC. See motor label for specific level of protection markings.

Motor feedback, auxiliary feedback, and I/O connector kits are not provided. Refer to the Kinetix Motion Control Selection Guide, publication GMC-SG001, for connector kit catalog numbers.

## Cables and Connector Kits

Factory manufactured feedback and power cables are available in standard cable lengths. They can provide environmental sealing and shield termination. Contact your nearest Allen-Bradley sales office or refer to your drive's installation manual for a complete listing of available cables.

If you choose to build your own cables, connector kits available for MP-Series Small Frame motors are described in the Kinetix Motion Control Selection Guide, publication GMC-SG001.

## Shaft Seal Kits

Catalog numbers and dimensions for Nitrile shaft seals are shown below.

| Motor | Cat. No. ${ }^{1}$ | Inside Diameter |  | Outside Diameter |  | Width |  |

## Additional Resources

These publications provide additional information about MP-Series motors, drives compatible with these motors, and good installation practices.

| Resource | Description |
| :---: | :---: |
| MP-Series Brushless Servo Motor Installation Instructions, publication MP-IN002 | Information on installing, large frame ( $\geq 215 \mathrm{~mm}$ ) MP-Series low-inertia motors |
| MP-Series Brushless Servo Motor Installation Instructions, publication MP-INOO6 | Information on installing, small frame ( $\leq 75 \mathrm{~mm}$ ) MP-Series low-inertia motors |
| Ultra5000 IPD Installation Instructions, publication 2098-IN001 | Information on installing, configuring, startup, and troubleshooting a servo drive system with an MP-Series motor and an Ultra5000 drive. |
| Ultra3000 DSD Installation Instructions, publication 2098-IN003 | Information on installing, configuring, startup, and troubleshooting a servo drive system with an MP-Series motor and an Ultra3000 drive |
| Kinetix 2000 Multi-axis Servo Drive User Manual, publication 2093-UM001 | Information on installing, configuring, startup, and troubleshooting a servo drive system with an MP-Series motor and a Kinetix 2000 drive |
| Kinetix 6000 Multi-axis Servo Drives User Manual, publication 2094-UM001 | Information on installing, configuring, startup, and troubleshooting a servo drive system with an MP-Series motor and a Kinetix 6000 drive |
| Allen-Bradley Industrial Automation Glossary, publication AG-7.1 | A glossary of industrial automation terms and abbreviations |
| System Design for Control of Electrical Noise Reference Manual, publication GMC-RM001 | Information, examples, and techniques designed to minimize system failures caused by electrical noise. |
| Kinetix Motion Control Selection Guide, publication GMC-SG001 | Specifications, motor/servo-drive system combinations, and accessories for Kinetix motion control products. |

You can view or download publications at

Notes:

## Rockwell Automation Support

Rockwell Automation provides technical information on the Web to assist you in using its products. At http://support.rockwellautomation.com, you can find technical manuals, a knowledge base of FAQs, technical and application notes, sample code and links to software service packs, and a MySupport feature that you can customize to make the best use of these tools.

For an additional level of technical phone support for installation, configuration and troubleshooting, we offer TechConnect support programs. For more information, contact your local distributor or Rockwell Automation representative, or visit http://support.rockwellautomation.com.

## Installation Assistance

If you experience a problem within the first 24 hours of installation, please review the information that's contained in this manual. You can also contact a special Customer Support number for initial help in getting your product up and running.

| United States | 1.440 .646 .3434 <br> Monday - Friday, 8 a.m. -5 p.m. EST |
| :--- | :--- |
| Outside United | Please contact your local Rockwell Automation representative for any <br> technical support issues. |
| States |  |

## New Product Satisfaction Return

Rockwell Automation tests all of its products to ensure that they are fully operational when shipped from the manufacturing facility. However, if your product is not functioning and needs to be returned, follow these procedures.

| United States | Contact your distributor. You must provide a Customer Support case number <br> (call the phone number above to obtain one) to your distributor in order to <br> complete the return process. |
| :--- | :--- |
| Outside United <br> States | Please contact your local Rockwell Automation representative for the return <br> procedure. |
